GENIUS RC LTD FRAME SET		
CR1 LTD carbon technology	2130 gr	4.68 lbs
SCAN 2 aluminium swingarm		
available in RC 10 color	V-brake or disc version	

Made of advanced CR1 LTD carbon, scan 2 aluminium, the RC limited is the ultimate statement in lightweight full-suspension bikes, weighing an amazing 10.33 kilos (22.6 lbs). With a weight similar to many hardtails, three shock settings and short wheelbase, this is truly a dream machine for those that desire the very best.

GENIUS RC LIMITED	XC racing	carbon mainframe	10.3 kg (22.6 lbs)	
	travel front 100mm, rear 90mm with traction mode and lockout			

The new CR1 LTD carbon frame sets the standard for performance and weight at an incredibly light 1590 grams (3.5 lbs for frame and swing-arm). The carbon frame provides very precise steering and handling yet is super-smooth over the bumps. Developed with Thomas Frisch-

knecht and the Swiss power team, the bike features a long top tube, short wheelbase and a steep headtube angle for the ultimate control in handling and climbing.

The Genius **MSD monochoque-style rear dropout** has three times the stiffness-to-weight ratio when compared to conventional dropouts. Our engineers sweat the details to ensure you have the lightest, most durable, and best shifting bicycle in the world.

# GENIUS MC

<b>GENIUS MC LTD FRAME SET</b>		
CR1 LTD carbon technology	<b>2250 gr</b>	<b>4.95 lbs</b>
X3 aluminium swingarm	available in MC 10 color	

<b>GENIUS MC LIMITED</b>	marathon & touring	carbon mainframe	11.5 kg (25.3 lbs)	
	travel front 90-130mm adj, rear: 125mm with traction mode and lockout			

**2003 MARATHON  
WORLD  
CHAMPION**

When we designed the Genius MC, we knew Thomas planned to battle for the first Marathon World Champion in Lugano Switzerland in 2003. With this goal in mind, our engineers began with the Genius RC platform and modified the geometry for more comfort for the all-day long distances of marathon racing. We then increased the travel to 125 mm (5 inches), allowing higher descending speeds in the world-famous Swiss Alps. Finally, a new Traction Control shock was developed for the increased travel required; with a Traction Control setting at approximately 80 mm of travel. This TC setting allows excellent traction in the climbs without the bobbing found in many progressive suspension designs. With our intelligent linkage system (ILS), we have a bike that could adjust to any situation and provide the maximum speed, comfort and control. The result of this extensive engineering and testing is the Genius MC (Marathon Concept) full-suspension design.

**GENIUS MC 10**

marathon & touring	carbon mainframe	11.9 kg (26.18 lbs)	
travel front 90-130mm adj, rear 125mm with traction mode and lockout			

FRISCHKI' VICTORY, LUGANO 2003

A long and intensive prototyping and testing phase resulted in slight adjustments and fine tuning of the machine, maximizing the performance of the bicycle. Thomas began to measure his performance and began to record faster segment splits on the Genius MC on the Marathon course, due in large part to his increased speeds in the downhill sections of the course.

Finally the moment of truth: an unforgettable day for Thomas Frischknecht, his crew, and the engineers of Scott — Thomas crossed the finish line in First Place to become the first Marathon World Champion of mountain bike history, riding a Genius MC.

<b>GENIUS MC 20</b>	marathon & touring	carbon mainframe	12.4 kg (27.28 lbs)	
	travel front 90-130mm adj, rear 125mm with traction mode and lockout

**SCALE LTD FRAME SET**

CR1 LTD carbon technology	<b>970 gr</b>	<b>2.13 lbs</b>
available in Scale 10 color	V-brake or disc version	

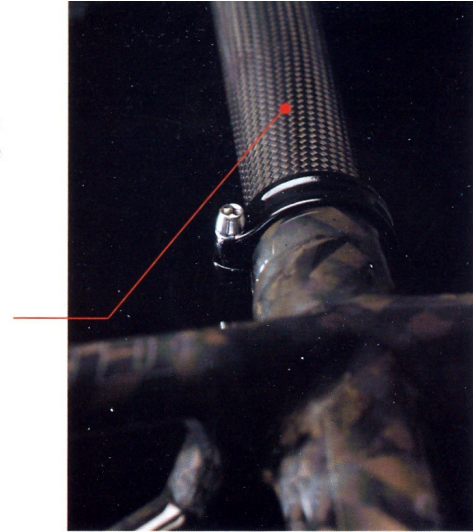

**SCALE LIMITED**

XC racing	the lightest carbon frame	travel front 80mm	8.8 kg (19.3 lbs)	
-----------	---------------------------	-------------------	-------------------	--

With our unique CR1 process, we pretension the carbon fibres under pressure, this results in a very strong and responsive frame design. As the fibers are optimized and extremely strong and efficient we are able to use less materials than other carbon frame makers. The result is a 970 gram (2.13 lbs) frame that sets the new standard in advanced technology and performance in hartail design.

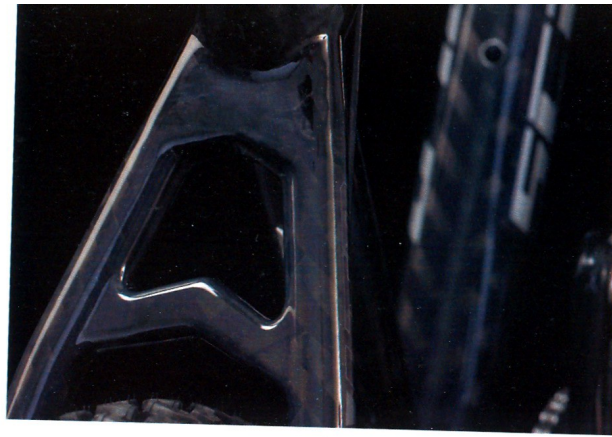

Scott's exclusive 34.9 mm **oversized seatpost** benefits the riding characteristics of the frame. It increases torsional stiffness while pedalling in the saddle by more than four percent. It also creates a stiffer seatpost since oversized tubes are more rigid. The larger intersection between the seat tube to top tube and seat tube to down tube allows us to remove material and weight from the tubes, thus reducing the frame's overall weight compared to traditional, smaller seat tube designs.

<b>SCALE 10</b>	XC racing	the lightest carbon frame	travel front 80 mm	
	9.7 kg [21.34 lbs]			

FOLLOW ME!

The 2005 CR1 Scale will enable Frischi to scale the mountains in Athens faster than any conventional carbon or advanced aluminum frame. The Scale features aggressive geometry with a short overall wheel base, and a long top tube that allows Thomas to corner as quickly and accelerate up the steep climbs with the most efficient hardtail we have ever produced.

# HIGH OCTANE

CARMINE FALCO

The High Octane is quite possibly the world's most adjustable downhill bike. It can be adapted to suit any rider in any conditions on the planet. Change your bottom bracket height or rear suspension travel to improve cornering and pedaling efficiency. Adjust the headtube angle or seat tube angle for steeps and optimum body position. Whatever you need to create the fastest downhill run or an epic freeride session, the High Octane combines all the key ingredients for success. With as much as 240 mm of travel, this rig can handle the highest speeds, biggest hits, and most technical lines.

## HIGH OCTANE 1

downhill	adjustable rear travel 180-240 mm	front travel 203 mm	
----------	-----------------------------------	---------------------	--

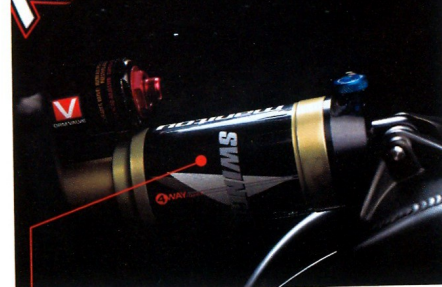

CARMINE FALCO

<b>HIGH OCTANE 2</b>	downhill & freeride	adjustable rear travel 180-240 mm	front travel 170mm	double chainring
----------------------	---------------------	-----------------------------------	--------------------	------------------

**NITROUS**

The **Manitou Swinger 4-way shock** with advanced SPV technology is light and reduces bobbing, translating to better pedalling efficiency. The travel can be adjusted to either 150 mm or 170 mm of total travel.

**NITROUS SL 11**

longtravel freeride & touring	adjustable rear travel 150 or 170 mm	
adjustable front travel 30-145 mm	14.3 kg (31.5 lbs)	

CARMINE FALCO & YOANN PACCARD

NIXON FORK [NITROUS SL 11]

So, you like to climb, but XC bikes don't provide the geometry or ability to handle a mean downhill. The Nitrous line has you covered. These lightweight, long-travel bikes allow riders to earn their downhills. Coming in at 14.3 kg (31.5 lbs), the Nitrous SL11 is a freerider's weapon of choice. Put it in the granny gear and climb your favorite mountain. Turn around, drop the seat and hit speeds that would peel the paint off your XC bike. You can adjust the rear suspension travel from 150 mm to 170 mm to accommodate varying conditions. This little brother to the High Octane should be re-named «versatility» because that's what it provides.

<b>NITROUS SL 22</b>	longtravel freeride & touring	adjustable rear travel 150 or 170 mm	
	adjustable front travel 60-150mm	15 kg (33 lbs)	

We use heat treated, light weight aircraft quality aluminium tubing. The shape and design of the tube is optimised for maximum strength and minimal weight.

## PERFORMANCE

**BOULDER**

all-round	hydro-formed frame	80mm front travel with TPC lockout	
shimano XT/LX	27 speed		

INDONESIA

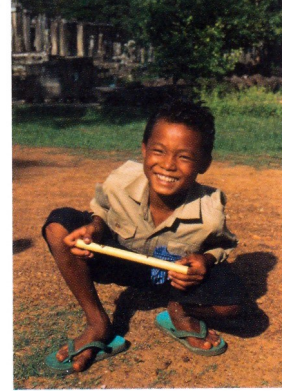

The Performance series – with its lineup of mountain hardtails – is designed for comfort and smooth-handling during those fast climbs and descents. The Reflex geometry provides a stable and responsive ride with a performance edge, perfect for day-long riding in all kinds of trail conditions. Quality components such as riser bars, higher-rise stems, comfortable seats and grips, and carefully selected shifting and braking components create outstanding performance.

The aluminium frames are lightweight and top quality. The custom-tapered racing stays provide superior frame strength and enable efficient, direct power transfer. The new high-tech hydro-formed frontend allows precise steering and control.
